

*Analia Canoba (Head of Scientific and Technical Support at the Argentine Nuclear Regulatory Authority)*

It is necessary to have a clear regulatory framework for applying a circular economy and some adaptations could be necessary. Graded approach in regulation is clue. Practical and not contradictory regulatory frameworks should be developed to achieve a circular economy. To apply proper waste management practices is fundamental to know the inventory of industries.

Stakeholders and particularly the public should be appropriately informed about this for its acceptance. Adequate technology to achieve a circular economy concept is needed. Economic aspects are also clue. Challenges to face for some countries to implement this philosophy will be address.
